### BMP D06: Non-Storm Water Discharges/Dry Weather Flows

#### Pollutants of Concern:
- Oil & Grease
- Sediment
- Bacteria
- Residual Chlorine
- Cleaning Products
- Fertilizers/ Pesticides

#### Purpose:
To prevent non-storm water discharges to the storm water drainage system by implementing measures to detect, correct, and enforce against illicit connections and discharges.

#### Application:
Irrigation systems, outdoor public use areas, and outdoor cleaning activities

#### Practices:
Anything that discharges into a storm drain that is not composed entirely of storm water is a **non-storm water discharge** (e.g., irrigation water runoff, wash water).

1. Mark storm drains with “No Dumping” signage to prevent people from dumping water or other pollutants into them.
2. If you see water going into a storm drain and it isn’t raining (dry weather flow), try to identify the source and stop it if possible.
3. Report non-storm water discharges into UC San Diego storm drains:
   - During business hours:
     - Report a water leak, broken pipe or sprinkler, or irrigation problem online at [wsc@ucsd.edu](mailto:wsc@ucsd.edu) or call Facilities Management Customer Relations help desk at (858) 534-2930
     - For hazardous materials spills call (858) 534-3660
     - For other non-storm water discharges, email [ehsea@ucsd.edu](mailto:ehsea@ucsd.edu) or call (858) 534-3660
   - After business hours: Call UCSD Police: (858) 534-HELP (4357)
4. See BMP A02: Spill Prevention, Control and Cleanup for spill response activities.

#### Frequency & Maintenance:
1. Look for non-storm water discharges/dry weather flows into storm drains during routine maintenance and grounds keeping activities.
2. Monitor irrigation system at least once a year for discharges into the storm water conveyance system. Adjust irrigation system as needed.
3. Maintain equipment to prevent leaks and spills.

#### Training:
Shops, trades, and theater staff that perform outdoor work activities that could contribute pollutants to the campus storm water system must take the "Annual Shop & Studio Environmental Compliance & Hazards Training" which includes storm water pollution prevention and spill prevention, control, and cleanup.
